

Replicate-aware corrected cut-site aggregates before and after quantile normalization

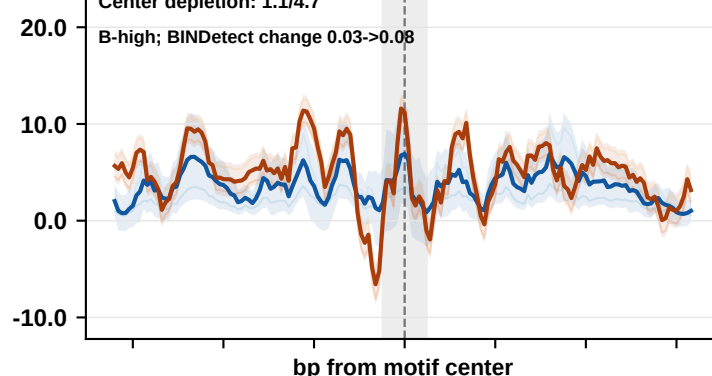

NFYB: corrected cut-site signal

Baseline difference: 9.8
two depth-offset replicates per condition

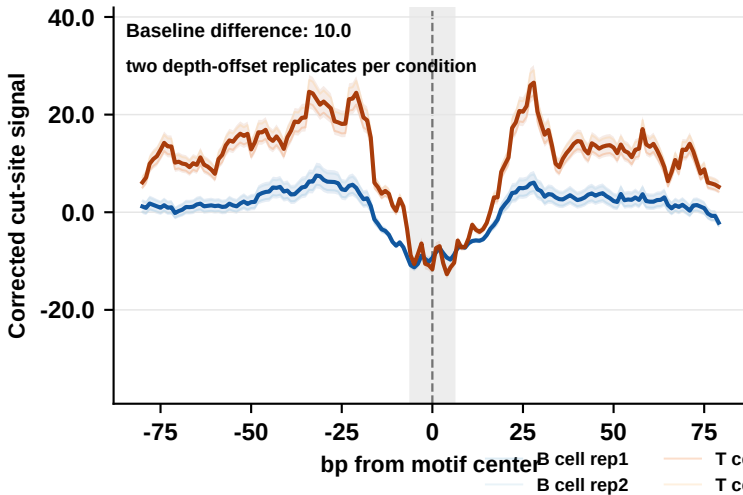

NFYB: after sample-quantile normalization

Baseline difference: 1.5
Center depletion: 1.1/4.7
B-high; BINDetect change 0.03->0.08

ATF7: corrected cut-site signal

Baseline difference: 10.0
two depth-offset replicates per condition

ATF7: after sample-quantile normalization

Baseline difference: 1.3
Center depletion: 18.0/31.9
T-high; BINDetect change -0.24->-0.17
